Conjunctiva photograph (tablet camera, ambient light) and laboratory haemoglobin
CP-AnemiC v1, 710 subjects
Duplicate audit
SHA-256 + pHash (mirror and near-duplicate); feature-space check
472 unique; 10 bilateral pHash: 452 strict
Three protocols
naive (708 rows)
group-clean (708, groups kept
strict, deduplicated (471)
Segmented ROI on black background
(released by the dataset authors)
63 colour statistics within the mask
(RGB, HSV, L*a*b*, El, chromaticities)
224 x 224 letter-boxed ROI, geometric augmentation only
LR, SVM-RBF, 7 Random Forest, XGBoost
(nested grid search)
SHAP
ImageNet-pretrained lightweight CNNs
(fine-tuned)
Grad-CAM
Evaluation on identical folds
AUC with bootstrap CI; DeLong and paired-bootstrap tests (Holm)
per-repetition AUC; nested screening thresholds (sensitivity 0.90)
calibration slope and intercept; PPV / NPV at 43 % and 70 % prevalence
leave-one-hospital-out (per centre, random effects); sex and age subgroups
sensitivity analyses: singletons only, random representative, shape-only
brightness-invariant features, 1-NN memorisation check
ONNX export: FP32 / FP16 / INT8 size and single-thread CPU latency
